

Museo 2D Family - Compare with reference code, output*

*Maybe a firmware update is required for this function!

Factory Configuration

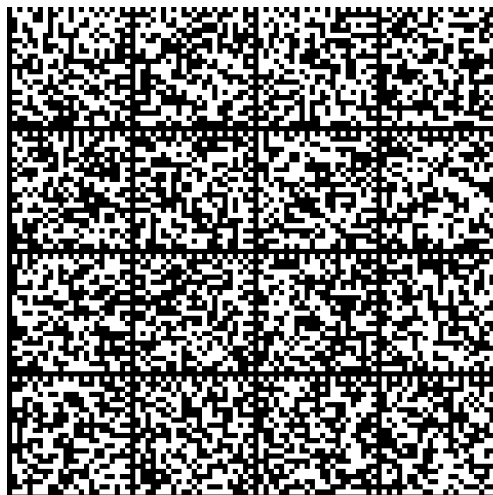

Interface (USB-KBD ALT-Mode) & Codes

This script compares barcodes using a changeable reference code.

To set a reference code, please scan the ERASEDATA barcode and then the reference code.

If the scanned code will match with the reference code, there will be an output using the set interface type.
It is possible to disable this function for normal scanning.

Erase Data code to set a
new reference code

Enable Script

Disable Script

Terminator / Suffix Selection for normal scanning
