

Gryphon 2D Family - Compare Code with Output*

*Maybe a firmware update is required for this function!

Factory Configuration

Interface (USB-KBD ALT-Mode) & Codes

This script compares two barcodes!

The first barcode will be saved in memory and compared with the second barcode. If the barcode is the same, the Green Spot & a good read beep appears and barcode will be send to host, if it is not the same a special error beep appears.
